VT :	VT770 Series
VT70 :	VT37/VT47/VT480/VT57/VT570/VT575/VT670/VT676 Series
VT80 :	VT48/VT480/VT580 Series
VT90 :	VT49/VT490/VT590/VT595/VT695 Series
VT700 :	VT700
WT :	WT600/WT610/WT615 Series
NP4100 :	NP4100/NP4100W Series
NP3250 :	NP1250/NP2250/NP3250/NP3250W Series
NP610 :	NP310/NP410/NP410W/NP510/NP510W/NP510WS/NP610/NP610S Series
NP2200 :	NP1200/NP2200 Series
NP216 :	NP110/NP115/NP215/NP216 Series
NP64 :	NP43/NP64 Series
M300 :	M260X/M260W/M300X/M300W Series
P420 :	P350X/P350W /P420X Series
U300 :	U300X/U310W Series
V300 :	V260/V260X/V200X Series

Contents

- 1. Projector Control
- 2. Connection Method
- 3. Interface Conditions
- 4. List of Commands
- 5. Command Descriptions
- 6. Table of Response Error Codes

1. Projector Control

NEC projectors make use of control commands that control the functions of the projector via connection with a personal computer or another device.

2. Connection Method

The following 3 kinds of connection methods are available for sending and receiving control commands.

 Serial connection using the serial port on the projector A serial cable is required.

- USB connection using the USB port on the projector A USB cable is required.
- 3. LAN connection
 - 3-1. LAN connection using a wired LAN card A wired LAN card and LAN cable are required.
 - 3-2. LAN connection using a wireless LAN card

A wireless LAN card is required.

3-3.LAN connection using the LAN port on the projector

A LAN cable is required.

3-4. LAN connection using a wireless LAN unit

A wireless LAN unit is required

Status of supported connection

- * A USB cable is supplied as standard with the MT860/1060/1065/1075.
- * The GT5000/6000 does not come with a USB cable.
- * Note that a connection method using the supplied USB cable is not supported for the LT220/240/260.
- * The serial cable, LAN card and LAN cable are separately sold.
- * The WT610 replaced the WT610 and uses the same command set.

(CAUTION)

Before making connections, be sure to invalidate the standby mode of the projector and set the "idle mode". The projector cannot use the control commands in the standby mode.

Setting method: Under projector [Projector Options] --> [Setup], enter a check for [Idle Mode] on Page 4.

(CAUTION) (!1)

Before making connections, be sure to select [NORMAL] for [STANDBY MODE].

Setting method: From the projector's menu, select [SETUP] --> [OPTIONS(2)] --> [STANDBY MODE]--> [NORMAL].

(CAUTION) (!2)

The projector accept the "POWER ON" command during [POWER-SAVING] mode for [STANDBY MODE].

Supplement:

- (!1) Only the NP600/NP610/NP3200 series is compatible.
- (!2) Only the M300 series is compatible.

[P350X/P350W/P420X Series]

STANDBY MODE: "POWER-SAVING"

	Serial	Wired	Wireless
Control Command	port	LAN port	LAN unit
POWER ON	Yes	No	No

Yes: Supported No: Not supported

3. Interface Conditions
Serial connection

The communications method conforms to the RS-232C standard.

	(1)	(2)	(3-1)	(3-2)	(3-3)	(3-4)

Baud rate: 38400 bps

(NP600 series, NP610 Series, VT60/VT70/VT80/VT90 series, VT700: 19200bps)

Data length:

Parity bit:
Stop bits:
Communications mode:

(1)
S bits
No parity
1 bit
Full duplex

The control connector is described below.

[HT/LT/NP40/VT70/VT80/VT90/WT]

The PC CONTROL connector is a mini DIN 8-pin connector.

```
1 To TxD of PC
2
3
4 To GND of PC
5
6
7 To RxD of PC
```

* 2, 3, 5, 6, and 8 are used inside the projector.

[GT/LT80/MT/NP1000/VT (except VT70/VT80/VT90)/NP3150/NP905/NP600/NP4000/NP3250/NP610/NP2200/NP216/M300/P420/U300/V300]

The PC CONTROL connector is a D-SUB 9-pin connector.

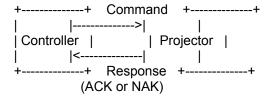

```
1
2 To TxD of PC
3 To RxD of PC
4
5 To GND of PC
6
7 To CTS of PC
8 To RTS of PC
9
```

4. Communication Frame

On the LT/MT/SX/GT series projectors communication is done in a frame composed of header, data, and checksum.

The frame sent from the controller to the projector is referred to as a command, and the one sent from the projector to the command as an reply is referred to as a response.

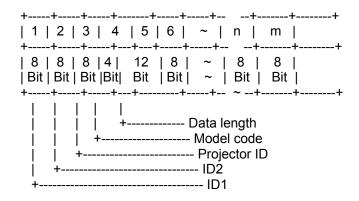

The response has two types; Acknowledge (hereafter referred to as ACK) that recognizes a command and Negative Acknowledge (hereafter referred to as NAK) that fails to recognize a command.

4-1. Frame Format

One frame comprises a header, a data portion, and a checksum.

```
Frame Format:
+-----+
| Header portion | Data portion | Checksum|
| (Max. 4095 Bytes) |
```

* ID1: (8 Bit)

This is an identification data assigned to each command.

Command:

This sets an identification data assigned to each command to send it. (See each command description.)

Response:

This returns the 6th bit of received ID1 as HIGH.

For ACK it sends the 8th bit back as LOW (recognized); for NAK it sends the 8th bit back as HIGH (not recognized).

* ID2: (8 Bit)

This is an identification data assigned to each command.

Command

This sets an identification data assigned to each command to send it. (See each command description.)

Response:

This returns the value of received ID2 as is.

* Projector ID: (8 Bit)

This is a projector ID for the projector that sends and receives frames.

Command:

This specifies a projector ID for the projector that sends and receives commands. (individual notification)

Entering 00H or FFH becomes a common command for all the projectors. (broadcast notification)

This is convenient for controlling multiple projectors at the same time.

- * When the controller is connected with the projector on a one-to-one basis Broadcast notification is recommended.
- * When the controller is connected with multiple projectors To control a certain projector, use "individual notification". For all others "broadcast notification" is recommended.

Response:

This returns the projector ID for a projector received regardless of individual notification or broadcast notification.

CAUTION:

To notify individually, specifying a model code from the following model codes is required.

* Model code: (4 Bit)

This is a model code for the projector that sends and receives frames.

Command:

This specifies a model code for the projector that sends commands. (individual notification)

Entering 0000B or 1111B becomes a common command for all the projectors. (broadcast notification)

This is convenient for controlling multiple projectors at the same time

- * When the controller is connected with the projector on a one-to-one basis Broadcast notification is recommended.
- * When the controller is connected with multiple projectors To control a certain projector, use "individual notification". For all others "broadcast notification" is recommended.

Response:

This returns the model code for a projector received regardless of individual notification or broadcast notification.

Table of Model codes

0000B : (broadcast notification)

0001B : MT Series 0010B : LT Series 0011B : SX Series

0101B : SX Series 0101B : GT Series

1111B: (broadcast notification)

CAUTION:

- * When the model code is set to "broadcast notification", the command becomes broadcast notification command, regardless of values of the projector ID.
- * Model code is specified using upper ranking 4 bits of data length. The lower ranking 4 bits becomes the upper bits of data length.

* Data length: (12 Bit)

This is data length of data portion (unit:: byte).

Command:

This sets data length of data added to a command to send it. (See each command description.)

Response:

This sets data length of data added to a response to send it. (See each command description.)

CAUTION:

Data length is specified using total of 12 bits (0 - 4095) of 4 bits of the 4th byte and 8 bits of the 5th byte.* The upper ranking 4 bits of the 4th byte is model code.

* Data portion

This becomes data of data length specified in the data length portion.

Command:

This sets data added to a command to send it.

(See each command description.)

Response:

This sets data added to a response to send it.

(See each command description.)

* Checksum

This is lower ranking 8 bits of the sum total of the header and data portions of one transmit and receive data frame.

4-2. Data portion of response

For ACK

This returns ACK without adding data portion to the command that does not request data.

This returns ACK with adding data to the data portion for the command that requests data.

For NAK

This adds a cause of not accepting the command to data portion to return it.

(Example) Power On

Command:

02H 00H FFH F0H 00H CKS

NAK:

A2H 00H 01H 20H 02H DATA01 DATA02 CKS

Data Contents

DATA01 Error types

00H : Not supported 01H : Parameter error

02H : Operation mode error 03H : Gain-related error 04H : Logo transfer error

DATA02 Error description

* When not supported

00H: Unknown command

01H: The current model does not support this function. 02H: This model is not compatible with the Switcher.

03H: This model is not compatible with the PC Viewer.

* When a parameter error occurs

00H: Unvalid values specified.

01H: Specified terminal is unavailable or cannot be selected

02H : Selected language is not available.

* When an operation mode error occurs

00H: Available memory reservation error

01H: External control working

02H: Operating memory

03H: Standby

04H: On Forced on-screen mute mode

05H: Link mode working

06H: Displaying a signal other than PC Viewer

07H:-No signal-

08H: Displaying a test pattern or PC Card Files screen.

09H: No PC card is inserted-0AH: Memory operation failed 0BH: Switcher mode working 0CH: Displaying the Entry List

* When a gain adjustment error occurs

00H: Group number / sub category number is not correct.

01H: Selected gain is not available.

02H: Adjustment failed

* When a logo transfer error occurs

00H: Start is not requested

01H: Cannot process due to storing

02H: Exceeds the total number of blocks required

at the time of start

03H: The block number of transferred data is not consecutive.

USB connection

This conforms to the USB1.1 standard.

Transfer speed: All speeds (supported) Endpoint: Control transfer Endpoint 0 Device class: HID class (Ver1.1)

USB1.1 Standard: Universal Serial Bus Specification Revision 1.1

HID: Human Interface Device

Connector Specifications

1 VBUS (Power supply)

2 D- (- Signal) 3 D+ (+ Signal)

4 GND (Ground)

* Depending on the USB host controller in the personal computer, the USB connection may fail to operate. When using a USB hub, please use a self-powered type, not a bus-powered type. When using a USB hub, connection to the first stage of the USB hub is recommended.

LAN connection

[Wired LAN port]

LAN interface

Communication speed: Auto setting (10/100Mbps)

Certified standard: IEEE802.3 (10BASE-T)

IEEE802.3u (100BASE-TX, Auto-Negotiation)

A LAN connector (8 male RJ-45 connector)

1 TD+ Transmit data (+) 2 TD-Transmit data (-)

3 RD+ Receive data (+)

Not used

5 Not used 6 RD- Receive data (-) 7 Not used 8 Not used

[Wired/wireless LAN card]

The LAN connections will differ depending on the commercial LAN card that is used.

- For information on supported LAN cards, visit:

Global: http://www.nec-pj.com/

[Port Number]

The TCP port number used is "7142".

098-196. WXGA MODE SETTING SET

5. Command Descriptions

Precautions with Inscriptions:

(*1) Projector ID

It is the value when forwarding a factory.

This reflects the "Projector ID" that has been set to the projector.

(*2) Model code: "xxH" inscription

This will differ depending on the projector.

In case of MT/NP1000 series 10H
In case of MT/NP3150 series 10H
In case of MT/NP3250 series 10H
In case of LT/LT80 series 20H
In case of NP61, NP62 series 20H
In case of NP216 series 20H
In case of V300 series 20H

In case of VT series	40H
In case of NP600 series	40H
In case of NP610 series	40H
In case of NP2200 series	40H
In case of M300 series	40H
In case of P420 series	40H
In case of GT series	50H
In case of HT series	60H
In case of WT series	70H
In case of HT10 series	D0H
In case of LT180 series	D0H
In case of LT30 series	D0H
In case of NP60 series	D0H
In case of NP4000, 4100 series	80H
In case of U300 series	80H
In case of NP905/NP901W/VT800	90H

(*3) Checksum: "CKS" inscription

This is the value of the lower 8 bits of the results calculated in byte units from all of the data up to the immediately preceding data.

Example:

20H 81H 01H 60H 01H 00H 03H

+ + + + + + + = CKS

(*4) Response error number

This is the value of the error number at the time of an error.

See "NAK" of "6-2. Data portion of response".

(*5) Term "RGB" and "COMPUTER"

On the HT1100, VT770, LT245/ LT265/ LT280/ LT380, NP1000/NP2000, NP1150/NP2150/NP3150/NP3151W, NP1250/NP3250/NP3250W, NP1200/NP2200, NP4000/NP4001, NP4100/NP4100W,

NP905/NP901W/VT800, LT25/LT30/LT35, VT48/VT480/VT580, VT49/VT490/VT590/VT595/VT695/VT700, NP300/NP400/NP500W/NP500WS/NP600/NP600S,

NP310/NP410/MP410W/NP510/NP510W/NP610WS/NP610/NP610S,

NP40/NP50/NP60/NP41/NP61/NP62/NP43/NP64 and P350X/350W/420X, the term "RGB connector" has been changed to "COMPUTER".

(*6) Term "DVI" and "COMPUTER"

On the LT380, NP1000/NP2000, NP1150/NP2150/NP3150/NP3151W, NP1250/NP2250/NP3250/NP3250W, NP1200/NP2200, NP4000/NP4001, NP4100/NP4100W,

NP300/NP400/NP500/NP500W/NP500WS/NP600/NP600S.

 $NP310/NP410/MP410W/NP510/NP510W/NP610WS/NP610/NP610S \ and \ VT595/VT695/VT700, \ the \ term\ "DVI \ connector" \ has been \ changed \ to "COMPUTER".$

006. RUNNING SENSE

Function:

This command acquires the operation mode of the projector.

Command:

00H 81H 00H 00H 00H 81H

Response: At the time of a success

Response: At the time of a failure

A3H 8AH 01H xxH 02H DATA01 DATA02 CKS

(*1) (*2)

(*4)

(*3)

Supplement:

(!) Lamp Hour Meter

This is the timer for normal lamp mode conversion.

Lamp Timer Acquisition Examples

DATA83 DATA84 DATA85 DATA86 : Lamp Timer

00H 00H 00H : Total 0 seconds

C0H 65H 52H 00H: Total 5400000 seconds/3600 = 1500 hours 00H E4H 57H 00H: Total 5760000 seconds/3600 = 1600 hours

Calculator Procedure

- 1) Set calculator to HEX
- 2) Punch in DATA86 DATA85 DATA84 DATA83 (005265C0)
- 3) Change from HEX to Decimal value will change to 5400000 seconds
- * The projector's hours of use is displayed in terms of Normal mode values. It is also displayed with truncated a number after decimal point.

037-1. LAMP INFORMATION REQUEST

Function:

This command acquires the lamp information (in terms of Normal mode (values) of projector.

Command:

03H 8CH 00H 00H 00H 8FH

Response: At the time of a success

23H 8CH 01H xxH 10H DATA01 .. DATA16 CKS (*1) (*2) (*3)

Data Portion Contents

DATA01 .. 04 : Lamp Hour Meter(Normal mode) (second)

DATA05 .. 08 : Reserved

DATA09 .. 12 : Lamp Use Warning Starting Time(Normal mode) (second)

DATA13 .. 16 : Lamp Use Prohibited Time(Normal mode) (second)

Response: At the time of a failure

A3H 8CH 01H xxH 02H DATA01 DATA02 CKS (*1) (*2) (*4) (*3)

Supplement:

Example for acquiring remaining lamp time (in terms of Normal mode values)

: Lamp Hour Meter (Normal mode)

DATA01 DATA02 DATA03 DATA04

30H 2AH 00H 00H : 10800 seconds

Calculator Procedure

- 1) Set calculator to HEX
- 2) Punch in DATA04 DATA03 DATA02 DATA01 (00002A30)
- 3) Change from HEX to Decimal value will change to 10800 seconds

: Starting time for lamp usage warning message (in terms of Normal mode values)

DATA09 DATA10 DATA11 DATA12

00H DDH 6DH 00H: 7200000 second

Calculator Procedure

- 1) Set calculator to HEX
- 2) Punch in DATA12 DATA11 DATA10 DATA09 (006DDD00)
- 3) Change from HEX to Decimal value will change to 7200000 seconds

Lamp remaining time (in terms of Normal mode values) = (7200000 - 10800) / 3600 = 1997 hour

037-2. LAMP INFORMATION REQUEST 2

Function:

This command acquires lamp remaining amount.

Command:
